

Credomatic Payment Gateway for Magento 2

Credomatic Payment Gateway can be configured in few simple steps. We will guide through each step in this do.

Installation Instructions

Manual installation (Zip File)

- 1) It is always a good practice to make a backup of your Magento installation before installing any extension.
- 2) Copy the folder “Remmote” to your Magento app/code folder.
- 3) Open your command line terminal, go to your Magento root directory and run the following commands to enable the module:

```
php bin/magento module:enable Remmote_Credomaticpayment  
  
php bin/magento setup:upgrade
```

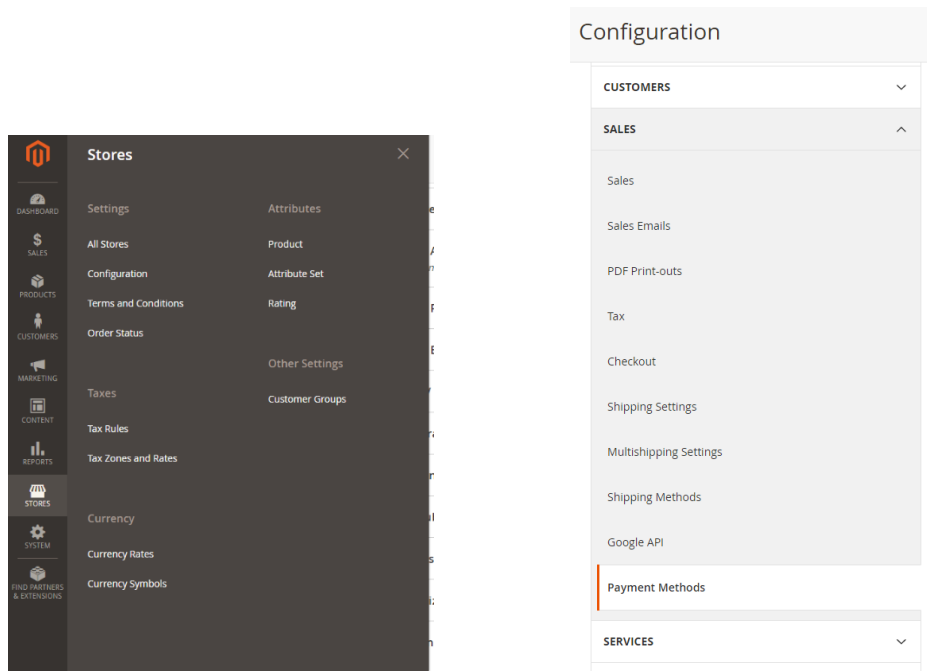

Note:

We assume you are running Magento in **developer mode** so you don't need to deploy static files. However, If your Magento installation is in [production or default mode](#), you might need to run the following command in order to generate the static files for your current installation (Learn more in <http://alanstorm.com/magento-2-frontend-files-serving>):

```
php bin/magento setup:static-content:deploy
```

Configuration Instructions

First, open your Magento Admin Panel and go to Stores > Configuration and in the left menu, click on Payment Methods under Sales section.

You will see multiple payment methods. Scroll down until you find the tab “Credomatic Payment Gateway”. Configure the extension based on your needs and save the changes.

Enable Method	<input type="text" value="Yes"/>	[WEBSITE]
Title	<input type="text" value="Credomatic"/> <small>The name that will be displayed in the checkout page for this payment method.</small>	[STORE VIEW]
Key ID	<input type="text"/> <small>To get your Key ID, login to Credomatic Admin Panel and in the left menu, go to Options > Settings. Then go to the section Security Options and click on Security Keys. You will find your Key ID and Key values there.</small>	[WEBSITE]
Key	<input type="text"/>	[WEBSITE]
Transaction Type	<input type="text" value="Authorize & Capture"/> <small>If Authorize and Capture (Sale), the transaction will be automatically charged on your customer's credit card. If Authorize(auth), the transaction will put the money in reserve and it will be only charged when you generate the invoice from Magento admin Panel or when you capture the money from Credomatic Admin Panel.</small>	[WEBSITE]
New order status	<input type="text" value="Processing"/>	[WEBSITE]
Accepted Credit Cards	<div style="border: 1px solid #ccc; padding: 5px; background-color: #f9f9f9;"> American Express Visa MasterCard Discover JCB </div> <small>The card types you want to accept. Make sure your merchant account support the cards type you want to accept.</small>	[WEBSITE]
Display Accepted Cards	<input type="text" value="Yes"/> <small>Display accepted card icons in the checkout page.</small>	[STORE VIEW]
Include CVV	<input type="text" value="Yes"/> <small>Set to Yes if you want to display the CVV field in the checkout page. Note: You don't need to enable the CVV verification in your Credomatic Admin Panel, this option might represent extra cost.</small>	[WEBSITE]
Sort Order	<input type="text"/>	[WEBSITE]
Debug	<input type="text" value="Yes"/> <small>If enabled, information about the API call Request and Response will be written to the file <code>var/log/remmote_credomaticpayment_debugging.log</code>. Make sure to disable this option and remove the log file after you finish your debugging process.</small>	[WEBSITE]

Getting your Key ID and Key from Credomatic admin panel:

To get your KEY and Key ID, login to [Credomatic admin panel](#) and in the left menu, go to Options > Settings. Then go to the section Security Options and click on Security Keys. You will find your Key ID and Key values there.

Configuring Transaction Type

This extension supports the option to only authorize a transaction and then capture the amount. This is useful for example when you want to reserve a product for your customer and you don't want to charge the money right away. To use this feature, set the transaction type to "Authorize" and save the changes. Once your customer places an order, the order amount will be put in reserved in his credit card. To capture this payment, you need to invoice the order and the transaction will be automatically captured. If you want to cancel the transaction, you can do this from Credomatic admin panel (Void transaction). You will need the transaction ID. *If you want to capture the transaction right after your customers place an order, set the option Auhtorize & Capture and save the changes.*

You are done with extension configuration. If you are having any questions or having difficulties configuring the extension, feel free to get in touch with us at info@remmote.com. If you have any feedbacks to improve the extension, they are also very welcome! Hablamos español!

From the Remmote team, we wish you happy sales!
